
HAESTAD METHODS

WASTEWATER COLLECTION SYSTEM MODELING AND DESIGN

First Edition

Authors

Haestad Methods
Thomas M. Walski
Thomas E. Barnard
Eric Harold
LaVere B. Merritt
Noah Walker
Brian E. Whitman

Managing Editor

Thomas E. Barnard

Project Editors

Kristen Dietrich, Adam Strafaci, Colleen Totz

Contributing Authors

Christine Hill, Gordon McKay, Stan Plante, Barbara A. Schmitz

Peer Review Board

Jonathan Gray (Burns and McDonnell), Ken Kerri (Ret.),
Neil Moody (Moods Consulting Pty, Ltd.), Gary Moore (St. Louis Sewer District),
John Reinhardt (Massachusetts Department of Environmental Protection),
Reggie Rowe (CH2M Hill), Burt Van Duin (Westhoff Engineering Resources)

HAESTAD PRESS
Waterbury, CT USA

Table of Contents

	Preface	xi
	Continuing Education Units	xv
	About the Software	xvii
Chapter 1	Introduction to Wastewater Collection System Modeling	1
	1.1 Wastewater Collection System Overview	1
	Terminology.....	2
	Sources of Wastewater	2
	Types of Conveyance.....	3
	1.2 Modeling	5
	Applications of Collection System Models	5
	Types of Collection System Modeling	7
	1.3 Historical Perspective on Collection System Analysis	7
	Collection Systems.....	7
	Hydraulics History	11
	Historical Summary	16
	1.4 The Modeling Process	16
Chapter 2	Steady Gravity Flow Hydraulics	23
	2.1 Fluid Properties	24
	Density and Specific Weight	24
	Viscosity	24
	Fluid Compressibility.....	27
	Vapor Pressure	27
	2.2 Fluid Statics and Dynamics	28
	Static Pressure	28
	Absolute Pressure and Gauge Pressure	29
	Velocity and Flow	30
	Reynolds Number.....	31
	Velocity Profiles	31

2.3	Fundamental Laws	32
	Conservation of Mass	32
	Conservation of Energy	33
	Conservation of Momentum	36
2.4	Hydraulic Design Variables	38
	Flow Rate or Discharge	38
	Channel/Pipe Slope.....	38
	Depth of Flow	38
	Velocity	39
2.5	Energy and Head Losses	40
	Energy Equation.....	41
2.6	Hydraulic Elements	44
	Open-Top Cross Sections	44
	Closed-Top Cross Sections.....	46
	Noncircular Cross Sections.....	49
2.7	Manning's n Variation	49
	Calculating n with the Darcy-Weisbach Equation	50
	Variation of n with Depth	52
	Recommended Values of Manning's n.....	53
2.8	Minor Losses in Junction Structures	54
	Energy-Loss Method	55
	Composite Energy-Loss Method	60
2.9	Tractive Force Self-Cleansing	63
	Tractive Tension	63
	Sediment Carrying Capacity – Experimental Analysis.....	65
	Camp Formula.....	69
	Yao's Method.....	69
	Abwassertechnische Vereinigung (ATV) Method.....	71
	Additional Considerations	71
2.10	Specific Energy and Critical Flow	72
	Specific Energy	72
	Froude Number.....	74
	Subcritical and Supercritical Flow.....	74
	Hydraulic Jumps.....	75
	Flow Profiles	76
	Backwater Curves	77
2.11	Hydraulics of Flow-Control Structures	78
	Orifices.....	79
	Weirs	79
	Gates	84

Chapter 3 Unsteady Gravity Flow Hydraulics 91

3.1	Basics of Unsteady Flow Analysis	93
3.2	Types of Routing	94

3.3	Hydrodynamic Equations	95
	Saint-Venant Equations.....	95
	Approximation to Hydrodynamic Equations	96
	Diffusion Analogy	97
	Kinematic Wave	97
	Muskingum Routing	98
	Muskingum-Cunge Routing	98
	Convex Routing	100
	Weighted Translational Routing	100
	Level Pool Routing	100
	Summary of Methods.....	101
3.4	Complications to Routing Methods	101
	Manholes and Junction Tables	103
	Surcharging	103
	Overflows and Diversions.....	104
	Parallel Pipes and Loops.....	105
	Flow Reversal	106
	Dry Pipes.....	107
	Drop Structures.....	107
Chapter 4	Force Main and Pumping Hydraulics	113
4.1	Friction Losses	113
	Darcy-Weisbach Equation	116
	Colebrook-White Equation and the Moody Diagram.....	117
	Hazen-Williams Equation	118
	Swamee-Jain Equation	120
	Manning Equation.....	120
	Pipe Roughness Changes	121
	Comparison of Friction Loss Methods	121
4.2	Minor Losses	122
	Minor Loss Valve Coefficients	123
4.3	Energy Addition – Pumps	125
	Pump Head-Discharge Relationship	125
	System Head Curves	126
	Other Pump Characteristic Curves	128
	Fixed-Speed and Variable-Speed Pumps	129
	Affinity Laws for Variable-Speed Pumps	129
	Power and Efficiency.....	130
Chapter 5	Model Construction	137
5.1	Developing the Modeling Plan	137
5.2	The Modeling Process	138
	Purpose and Objectives of a Model.....	138
	Develop Alternatives.....	141
	Scales of Models.....	141
	Software Selection and Training	143

	Define Data Requirements.....	143
	Identify Data Sources	144
	Collect Data.....	146
	Validate the Data.....	147
	Build the Model.....	148
	Identify Data Gaps.....	148
	Sensitivity Analysis	148
	Calibrate the Model	148
	Validate the Model.....	148
	Run Simulations.....	149
	Develop Solutions	150
	Bookkeeping	151
5.3	Constructing the Sewer Model	152
	Level of Detail.....	153
	Subbasin Delineation.....	154
	Pipes.....	154
	Manholes.....	160
	Pumps.....	164
	Wet Wells.....	168
Chapter 6	Dry Weather Wastewater Flows	173
6.1	Definition of Flow Rates	175
	New Systems	175
	Existing Systems.....	176
6.2	Unit Load Factors	176
	Residential.....	176
	Commercial Sources	177
	Industrial Wastewater Flows.....	179
	Fixture Unit Method.....	181
	Land-Use Methods	183
	Measured-Flow Methods.....	185
	Assigning Loads to a Model.....	187
6.3	Peaking Factors	187
	Peaking Factor Charts and Equations.....	188
	Minimum Flows.....	190
	Selection of Flow Generation Rate and Peaking Factor	191
6.4	Time-Varying Flows	193
	Diurnal Curves	193
	Developing Systemwide Diurnal Curves.....	195
	Defining Usage Patterns Within a Model.....	196
Chapter 7	Wet Weather Wastewater Flows	203
7.1	Wet Weather Flow Definitions	204
	What Is Wet Weather Flow?	204
	Components of Flow in Wastewater Collection Systems.....	204
	Modeling Wet Weather Flows.....	206

7.2	Wastewater Collection System Hydrology	208
	Combined Sewer System Hydrology	208
	Modeling Combined Sewer Systems	210
	Separate Sanitary Sewer System Hydrology	212
	Modeling Separate Sanitary Sewer Systems	213
	Continuous versus Event Hydrology	216
7.3	Rainfall	217
	Rainfall Data	217
	Selecting Model Simulation Events	218
	Calibration Events	219
	Design Storms	219
	Continuous Records	228
7.4	Modeling Runoff	229
	Rainfall Abstractions	230
	Horton Equation	233
	Green-Ampt Equation.....	233
	Rational Method	234
	NRCS (SCS) Method.....	236
7.5	Determining Hydrographs from Runoff Volumes	239
	Determining Peak Flow and Time to Peak.....	240
	Snider Triangular Hydrograph.....	240
	Unit Hydrograph Approach	242
	NRCS (SCS) Dimensionless Unit Hydrograph	243
	Nonlinear Reservoir	246
7.6	Empirical Methods for Generating Hydrographs	248
	Percentage of Rainfall Volume (R-Factor)	249
	Unit Hydrographs from Flow Measurements.....	249
	Simplifications to Unit Hydrograph	250
	Inflow Coefficient Method	250
	Rainfall/Flow Regression.....	252
	RTK Hydrograph Method.....	254
	Unit Loads for Design Studies.....	261
7.7	Snowmelt	262
	Runoff Potential	262
	Snowmelt Models	263
Chapter 8	Data Collection and Flow Measurement	271
8.1	Flow Measurement Considerations	271
	Components of Flow	272
	Review of Existing Information.....	273
	Selection of Metering Locations.....	273
	Safety Considerations	274
8.2	Flow Measurement	275
	Hydraulic Control Sections in Open Channels	275
	In-Pipe Methods.....	280
	Manual Methods.....	281

8.3	Instrumentation	283
	Depth	284
	Velocity Meters.....	287
8.4	Precipitation Measurement	292
	Precipitation Data Acquisition.....	293
	Measurement of Rainfall.....	293
	Gauge Operation Considerations.....	294
	Radar Imagery.....	295
Chapter 9	Model Calibration	301
9.1	Basic Calibration Concepts	302
	Overview of Calibration	302
	Calibration Parameters.....	303
	Building-Block Approach	305
	Steady-State and Extended-Period Simulations.....	305
9.2	Dry Weather Flows	305
9.3	Wet Weather Flows	309
	Constant Unit Rate Method.....	310
	Percentage of Rainfall Volume (R-Value)	312
	Percentage of Stream Flow	313
	RTK Hydrograph.....	315
	Predictive Equation Based on Rainfall-Flow Regression.....	316
9.4	Special Considerations in Calibration	320
	Volume Differences.....	321
	Shape Considerations.....	322
	Timing Shifts.....	323
9.5	Understanding Overflows	324
	Estimating Combined Sewer Overflow	325
	Estimating SSOs	326
	Detecting Overflows with Scattergraphs	326
Chapter 10	Design of New Gravity Wastewater Collection Systems	333
10.1	Materials	334
	Pipes.....	334
	Manholes.....	335
	Other Appurtenances.....	336
10.2	Initial Planning	337
	Decision to Provide Sewer Service to an Area.....	337
	Types of Conveyance.....	338
	Separate versus Combined Systems.....	338
10.3	Preliminary Design Considerations	339
	Data Requirements	340
	Alternatives.....	341

10.4	Initial System Layout	341
	Gravity Sewer Layout	342
	Manhole Location and Spacing	342
	Location of Pumping Facilities	343
	Sewer Easements.....	343
	Example of a Sewer Network Layout	344
10.5	Flows in Sanitary Sewers	346
	Low Flows in Early Years	346
	Allowances for Infiltration and Inflow	346
	Phased/Staged Construction	348
10.6	Horizontal and Vertical Alignment	348
	Pipe Slopes.....	348
	Curved Sewer Alignment.....	349
	Minimum Depth of Cover	349
	Maximum Depth.....	352
10.7	Hydraulic Design	352
	Pipe Sizing	354
	Manholes.....	355
	Computer Modeling for System Design.....	356
	Steady Flow versus Extended-Period Simulation (EPS) Analysis	356
	Design Maximum Flow Rates with Pumping	358
10.8	Special Installations	358
	Sewers in Steep Terrain.....	358
	Sewers Along Streams.....	359
	Elevated Crossings	359
	Inverted Siphons (Depressed Sewers).....	360
10.9	Wastewater Collection System Optimization	361

Chapter 11	Wastewater Collection System Evaluation and Rehabilitation	371
11.1	Planning for System Characterization	372
	Performance Requirements	373
	Current Performance.....	374
	Approach to System Characterization.....	375
11.2	System Characterization	376
	Review Existing Records	376
	Update System Inventory	378
	Collection System Condition Investigation	379
	Inspection of the Condition of Controls and Ancillary Structures.....	382
11.3	Hydraulic Investigations	384
	Field Data Collection.....	385
	Data Analysis	386
	Application of Hydraulic Modeling	390
	Assess Hydraulic Performance.....	394

11.4	Evaluating Rehabilitation Strategies	395
	Preventive Maintenance Program	399
	Source Controls	399
	Sewer Separation.....	400
	Pipe Rehabilitation/Replacement	401
	Inflow/Infiltration Control.....	402
	Interbasin Transfers	405
	Real-Time Controls.....	405
	Storage Facilities	406
	Wet Weather Treatment Facilities.....	407
Chapter 12	Force Mains and Pump Stations	419
12.1	Need for Pump Stations	420
12.2	Pump Station Overview and Design Considerations	423
	Components.....	423
	Design Decisions.....	425
	Pump Capacity	425
	Pump Station Configuration	426
	Pump Types and Selection.....	427
	Wet Well Sizing	432
	Net Positive Suction Head.....	433
	Appurtenances	435
12.3	Force Main Sizing with a Single Pump Station	435
	Determining Pipe Sizes.....	436
	Developing System Head Curves.....	437
	Selecting Economical Pipe Size.....	438
12.4	Modeling Pumped Systems	441
	Modeling Pumps.....	442
	Downstream Flow Attenuation	442
	Identifying Potential Problems	443
	Modeling a Pipeline with Multiple High Points	444
12.5	Efficiency Considerations	448
	Constant-Speed Pumping.....	448
	Variable-Speed Pumping	451
	Automated Energy Calculations	455
12.6	Force Mains with Multiple Pump Stations	455
12.7	Hydraulic Transients	457
Chapter 13	Low-Pressure Sewers	467
13.1	Description of Pressure Sewers	468
	Storage Tanks.....	470
	Service Lines	470
	Pressure Mains	471
	Air-Release/Vacuum-Breaker Valves	471
	Discharge Points.....	471

13.2	Estimating Flows	472
	Empirical Approaches.....	473
	Poisson Distribution to Estimate Loads	475
13.3	Pressure Sewer Design Considerations	478
13.4	Modeling Pressure Sewers	479
	Modeling to Size Pressure Mains	480
	Representing All Service Connections as Nodes	481
	Detailed Models	482
Chapter 14	Utilizing GIS	489
14.1	GIS Fundamentals	490
	Data Management	491
	Geographic Data Representations.....	494
14.2	Developing an Enterprise GIS	495
	Keys to Successful Implementation	495
	Needs Assessment	496
	Design.....	497
	Pilot Study	504
	Production	504
	Rollout	505
14.3	Model Construction	505
	Model Sustainability and Maintenance.....	506
	Communication Between the GIS and Modeling Staff	507
	Network Components.....	508
	Wastewater Loads.....	510
	Building the Model.....	515
	Pitfalls in Constructing Models from GIS	517
	Loading Model Results to GIS	520
14.4	GIS Analysis and Visualization	520
	Basic GIS Uses and Examples	520
	Advanced GIS Uses and Examples	522
Chapter 15	Regulatory Issues	529
15.1	United States Laws and Regulations	529
	Clean Water Act	530
	U.S. Federal Regulations.....	531
	Water Quality Standards and Total Maximum Daily Loads (TMDLs)	537
	Section 404 Dredge and Fill Permits	538
15.2	Canadian Laws and Regulations	538
	Sanitary Sewer Systems	539
	Combined Sewer Systems	539
15.3	European Union Laws and Regulations	546
	Urban Wastewater Treatment Directive (UWWTD)	546

Water Policy Framework Directive (WPFDD)	549
Integrated Pollution Prevention Control Directive (IPPC)	549
Product Directives	549
Control of CSOs in EU Member States	549
Design Criteria for CSOs.....	550
15.4 Use of Models for Regulatory Compliance	551
Appendix A Symbols	557
Appendix B Conversion Factors	563
Appendix C Physical Properties	567
Bibliography	573
Index	589
